

EXTRA CRAFTY:

Shape Detective

Become a shape detective! Create these nifty magnifying glasses, then see how many shapes you can find.

1. Print out the shape magnifying glasses on cardstock.
2. Cut out each of the shapes. Be careful not to cut on the dotted lines.
3. The long skinny rectangles will be your handle. Fold along the dotted line and tape or glue a standard size craft stick between the two shapes.
4. For each of the larger shapes, carefully cut out the center white shape. Do not cut through the colored shape.
 - a. For the triangle, carefully cut along the 1 inch bold line that is in the middle of the dotted line. This will allow you to insert the handle.
5. Now it is time to prep the plastic viewing window.
 - a. Take a plastic storage bag and cut along the edges so it is one layer.
 - b. Cut four pieces of plastic of the following approximate sizes: a 4 inch square, a 3.5 by 5 inch rectangle, a triangle that is about 4.25 inches wide and 3.5 inches tall, and a 4 inch diameter circle. You can use the white shapes you cut out in step 4 as a guide. Just be sure to add about 1/4 inch extra space around the edges.
6. Tape the plastic to the appropriate shape on the back (non-colored) side. Be careful that the tape doesn't show through the viewing window.
7. For all of the shapes, tape and/or glue the handle in at the bottom. When looked at from the front, the name of the shape should be directly above the handle.
8. Fold along the dotted line for the square, rectangle, and triangle.
9. Glue the back of the two shapes together.
10. Now start sleuthing! See what shapes you can find around your house and yard.
